

# Spooner Memorial Library

## Future Exterior Layout Plan

### Estimated Square Footage:

8,750 sq ft (Main Floor)  
4,550 sq ft (Upstairs Children's Area)  
4,550 sq ft (Downstairs Children's Area)  
-1,560 for ramp on all 3 floors  
Total 16,290

### Plan:

1. Tear down entire current children's wing.
2. Build basement, main floor, and upstairs where current children's wing stands but expand wing to be 10 feet from sidewalk on all ends (note - a public hearing is being scheduled to permit this).
3. Upstairs will become meeting rooms, a maker space, and program space which will mean this space will not need to be covered by library staff.
4. Basement will be storage, employee workspace, and a mechanical room.
5. There will not be an elevator. A ramp will be built near the entrance to assist patrons and staff in going upstairs and downstairs. The ramp will use up 1,560 square feet of space, but will cost the library significantly less money to install and mean no yearly maintenance fees or dedicated phone lines.
6. The siding on the outside of the library will be replaced with non-rotting material.
7. The inside of the library will be remodeled, but the break room will not, as it was recently done.
8. The main floor of the library will be dedicated to material space, sitting areas, small study rooms, a used book room, and staff space.
9. The community garden beds will be moved in front of the book mural and the gazebo will be moved to the garden area. The fountain will be dismantled and put back up in a smaller format.
10. There will be two single stall bathrooms on all floors.
